## Your Product additional Bullet Points

Aloe Vera is the plant that is most similar to human skin in its chemical makeup, therefore, the human body has an affinity for aloe that allows it to penetrate deep into it's dermal layers.

For thousands of years, humankind has sought and used the healing properties of the aloe vera plant to treat blisters, dry skin and itchiness.

At Honeyskin, we combined the powerful properties of Orchid Stem Cells with the hydrating amino acids of Aloe Vera to soften your skin without leaving behind a sticky residue. This product can be used on your hair, your face, and your skin.

**pH Balanced at 5.5**
